31 FACILITY:  SET utility
32
33 ABSTRACT:
34
35     These are the error messages used by the SET command
36
37 ENVIRONMENT:
38
39     VAX/VMS operating system, privileged user mode utility,
40     operates at non-AST level.
41
42 AUTHOR:  Greg Robert,  June, 1981
43
44 MODIFIED BY:
45
46     V03-027 AEW008      Anne E. Warner      07-Aug-1984
47     Add non-fatal error MSCPNOTLD to tell the user that
48     the MSCP-Server code is not loaded.  The original use
49     for this is in SET DEV/SERVED when trying to MSCP serve
50     a device when the server code is not loaded.
51
52     V03-026 AEW007      Anne E. Warner      25-Jul-1984
53     Add non-fatal error INVDEV to tell user that the
54     device type specified is invalid for the operation
55     requested.  Originally for use in SET DEVICE.
